Single Point Gas Controller Rex

1 Description

The Gas Controller REx is used for measuring, monitoring and warning of refrigerant gases (HFC or HFCF) in the ambient air in the ppm range.

The REx is especially employed for monitoring leakages in refrigeration plants to assure the compliance with the requirements according to EN 378.

A semi-conductor sensor for refrigerant gases (MP01) is integrated in the gas controller.

In addition, an external analog gas transmitter (MP02) can be connected to the controller for monitoring toxic, combustible or refrigerant gases.

Four alarm thresholds are free adjustable for each Measuring Point (MP).

Every alarm threshold can be assigned to one of the maximum 4 alarm outputs (RX).

The Gas Controller can interface via the (0)4 to 20 mA or (0)2 to 10 V output signal with any compatible electronic analog control, DDC/PLC control or automation system.

The free adjustable parameters and alarm threshold make a very flexible use in the gas measuring possible. Simple and comfortable commissioning is possible due to factory adjusted parameters.

The configuration, parameter settings and operation are easy to do without programming knowledge thanks to the simple, easy-to-handle system menu.

The Single Point Gas Controller REx must not be used in potentially explosive atmospheres.

The gas controller must only be used within environmental conditions specified in the Technical Data.

2 **Operating Instruction**

The complete configuration, parameterization and service are made via keypad user interface in combination with the display screen.

Security is provided via two password levels.

2.1 **Description Keypad User Interface**

Exits programming, returns to the previous menu level.

Enters submenus, saves settings.

Scrolls up in main menu and submenus, increases or decreases a value.

Moves the cursor.

LED orange:	Flashes when alarm one or more alarms are active. Permanently on, when one of the relays is manually operated.
LED red:	Flashes when alarm two or more alarms are active. Permanently on, when one of the relays is manually operated.
LED yellow:	Flashes at system or sensor failure or when maintenance needed.
LED green:	Power LED

2.2 Setting / Changing Parameters or Set points

Open desired menu window.

Code window opens, if no code level approved.

After input of the valid code the cursor jumps on the first position segment to be changed.

Push the cursor onto the position segment, which has to be changed.

Change the parameter / set point.

Save the changed value.

Finish

2.3 Code Levels

All changes of parameters and set point values are protected by a four-digit numeric code (= password).

The code level 1 permits the operation of the REF.

This code level is intended for the customer.

The code can be changed individually via code level 2.

In code level 2 all parameters and set points are released, this code level is only for the service technician.

The release of the code level is deleted if no button is pushed within 15 minutes.

All menu windows are visible without entering a code.

3 Menu Overview

The operation of the Single Point Gas Controller REF is effected by a simple and logical menu structure which is easy to learn.

The operating menu contains the following levels:

- Starting menu.
- Main menu
- Submenu 1 and 2

3.1 Fault Management

The integrated fault management records the last 15 faults with date and time stamps in the menu "System Errors".

Additionally a record of the faults occurs in the "Error Memory", which can be selected and reset only by the service technician.

An actual fault is displayed in plain text in the starting menu.

The failure relay which is defined in the system parameter "Failure relay" is activated.

The yellow LED in the front of the gas controller flashes.

In case of fault of a measuring point (MP) the alarms defined in the menu "MP Parameter" are activated additionally.

3.1.1 Acknowledge a Fault

Attention:

Acknowledging a fault is only possible after having removed the cause.

3.1.2 Error Memory

The menu "Error Memory" in the main menu "System Error" can only be opened via code level 2.

In the error memory the last 15 faults are listed for the service technician even if they were already acknowledged in the menu "System Error".

The deletion of each individual message is effected in the same way as the reset of a fault.

3.1.3 System Errors

The following system error messages are recorded:

MP 02 > 22 mA	Current signal at analog input > 22 mA / 11Vdc. (External Detector)
Cause:	Short-circuit at analog input or transmitter not calibrated, detector defective.
Solution:	Check cable to detector, make calibration, replace the detector.
MP 02 < 3 mA	Current signal to analog input < 3 mA / 1,3Vdc. (External Detector)
Cause:	Wire breaking at analog input or detector not calibrated, detector defective.
Solution:	Check cable to detector, make calibration, replace the detector.
GC Error:	Internal communication error I/O Board to LCD Board.
Cause:	Internal error.
Solution:	Change the Gas Controller module.
Maintenance:	System maintenance is necessary.
Cause:	Maintenance date exceeded.
Solution:	Make the maintenance.

3.2 Status Alarm

Display of the actual alarms in plain text in the order of their arrival.

Only those measuring points are displayed, where at least one alarm is active.

Changes are not possible in this menu.

Symbol	Description	Function
MP 01	Measuring (MP) Point No.	
AX	Status alarm	A1 = Alarm 1 ON $A2 = Alarm 2 ON$ $A3 = Alarm 3 ON$ $A4 = Alarm 4 ON$

3.3 Status Relay

The REF has two alarm relays (R01 / R02) and two open collector outputs (R03 / R04).

In the following description they are referred to as alarm relays.

Display of the actual status of alarm relays.

Manual operation of the alarm relays.

Symbol	Description	Setting Status	Function	
R 01	Relay No. 01		Select Relay No).
OFF	Status relay	OFF	OFF ON Manual OFF Manual ON	= Relay OFF (No gas alarm) = Relay ON (Gas alarm) = Relay manual OFF = Relay manual ON

3.3.1 Manual Operation of the Relays

The manual operation of the alarm relays is managed in the menu "Status Relay".

If a relay is in the manual ON or OFF status, the orange/ red alarm LED at the Gas Controller is lit continuously.

The external operation of the alarm relay via an assigned digital input has priority to the manual operation in the menu "Status Relay" and to gas alarm.

Relays manually operated in the menu "Status Relay" are deleted again by selecting the function "Automatic".

Acknowledging the relays in latching mode is also effected in this menu.

3.4 Menu Measuring Values

In this menu the current value (CV) and average value (AV) with gas unit and gas type for each active measuring point (MP) is displayed as well as the defined control mode (CV or AV mode).

MP 01	R134 ppm
20 AV	R134 ppm 33*CV

Symbol	Description	Setting Status	Function
MP 01	Measuring P. No.		Selection of MP No
R134	Gas type	R134	See 3.6.2
ppm	Gas unit		See 3.6.2
CV	Current value	CV	Current value of gas concentration
AV	Average value		Average value (10 measured values within the time unit)
*	Control mode		Display of selected control mode (CV or AV)
Not active	Status MP	Not active	MP not active
Error	Fault MP		Current signal < 3 mA or > 22 mA

3.5 Menu Relay Parameters

Display and change of the parameters for each alarm relay

3.5.1 Relay Mode

Definition of relay mode:

Symbol	Description	Setting Status	Function
R 01	Relay No.		Selection of relay
De- energized	Relay Mode	De- energized	De-energized = Alarm ON = Relay ON Energized = Alarm ON = Relay OFF

3.5.2 Relay Function Static / Flash

Definition of relay function

Symbol	Description	Setting Status	Function
R 01	Relay No.		Selection of relay
0	Function	0	0 = Relay function static > 0 = Relay function flashing (= Time period in sec.) Impulse / Break = 1:1

3.5.3 Latching Mode

Definition of latching function

Symbol	Description	Setting Status	Function	
R 01	Relay No.		Selection of relay	
No	Latching Mode	No	No= Latching mode non activeYes= Latching mode active	

Acknowledging a latching relay in the menu "Status Relay" is only possible if the gas concentration is again lower than the alarm threshold including hysteresis.

In this case the status latching occurs in the display.

Example: Alarm relay R2 with latching mode

3.5.4 Horn Function

The internal horn is connected to alarm relay R3 (open collector).

This alarm output is defined as horn relay by this parameter with the following possibilities to reset.

- By pressing any of the 4 push-buttons (only possible in the starting menu).
- Automatic reset at the end of the fixed time.
- By an external push-button (assignment of the appropriate digital input).

The horn function is only activated if at least one of the two parameters (time or digital input) is set.

Special function Response

After acknowledging the output (by push-button or externally) time starts.

When this time has run out and the alarm is still acting, the relay is set again.

Symbol	Description	Setting Status	Function
R 03	Relay No.		Selection of relay
Quitt	Mode	0	 0 = Reset of the relay after time having run out, or by push-button 1 = Reset of the relay by push-button, after time having run out and when alarm is still acting, relay is set again. (Response function).
Time		120	Time for automatic reset function or response function 0 = no reset function
DI		0	Assignment, which digital input resets the output.

Acknowledge the horn output

Special function "Response". (Return of the horn relay)

3.5.5 External Relay Operation

Assignment to a digital input (DI) for external switching of the alarm relay (ON and/or OFF).

This function has priority to gas alarm and/or manual switching in the menu "Status Relay".

Symbol	Description	Setting Status	Function
R 01	Relay No.		Relay Selection
DI-ON	External On	0	If digital input closed, relay switches ON
DI-OFF	External Off	0	If digital input closed, relay switches OFF

3.5.6 Delay Mode of the Relay.

Delay time ON starts when the alarm is released and/or delay time OFF starts when the alarm returns to normal condition.

Symbol	Description	Setting Status	Function
R 01	Relay No.		Relay Selection
0 s	Delay Time ON	0	Mode ON: Relay is only activated at the end of the defined time (sec.) 0 sec. = No delay
0 s	Delay Time OFF	0	Mode OFF: Relay is only deactivated at the end of the defined time (sec.) 0 sec. = No delay

3.6 Menu MP Parameters

Display and change of parameters, assignment of alarms to alarm relays and activation of Measuring Points (MP).

Symbol	Description	Setting Status	Function
MP 01*	Measuring point		Selection MP No.
Active	MP Status	Not active	Active = Measuring point activated at the controller Not active = Measuring point not activated at the controller

*MP01 = On-board sensor *MP02 = External transmitter (optional)

3.6.2 **Selection Gas Type**

Assign gas type to attached gas transmitters.

Symbol	Description	Setting Status	Gas type		Unit	Measuring range ¹
MP 01	Measuring point					
R134	Gas type	R134	$\begin{array}{c} \text{CO} \\ \text{Ex} \\ \text{NO} \\ \text{NO}_2 \\ \text{NH}_3 \\ \text{O}_2 \\ \text{CO}_2 \\ \text{SO}_2 \\ \text{H}_2 \\ \text{S} \\ \text{CL}_2 \\ \text{ETC} \\ \text{VOC} \\ \text{R401} \\ \text{R402} \\ \text{R408} \\ \text{R409} \\ \text{R404} \\ \text{R408} \\ \text{R409} \\ \text{R404} \\ \text{R416} \\ \text{R502} \\ \text{R410} \\ \text{R411} \\ \text{R111} \\ \text{R1123} \\ \text{R134} \\ \text{R22} \\ \text{TEM} \\ \text{RH} \\ \text{CO}_2 \\ \text{TOX} \\ \end{array}$	Carbon monoxide Combustible gases Nitrogen oxide Nitrogen dioxide Ammonia Oxygen ² Carbon dioxide Sulphur dioxide Hydrogen sulphide Chlorine Ethylene oxide Air quality Refrigerant gas Refrigerant gas	ppm % LEL ppm ppm ppm ppm ppm ppm ppm ppm ppm pp	0 - 300 0 - 100 0 - 50 0 - 25 0 - 25 0 - 2000 0 - 100 0 - 200 0 - 100 0 - 200 0 - 100 0 - 2000 0 - 2000 0 - 2000 0 - 2000 0 - 2000 0 - 2000 0 - 3000 0 - 3

¹ Recommendation without obligation ² Decreasing signal at oxygen measurement!

3.6.3 Measuring Range

The measuring range can be defined arbitrarily between 10 and 10000.

The measuring ranges in the table Gas Type are only recommendations without obligation.

The measuring range for MP01 (integrated gas sensor) is factory set, the measuring range for MP02 must agree with the signal (4 to 20 mA / (0)2 to 10 V) of the attached gas detector.

(4 mA / (0)2 V = Display 0 (ppm); 20 mA / 10 V = Display of the ultimate value of the measuring range)

3.6.4 MP Signal

Gas transmitters using electro-chemical or catalytic beat gas sensors normally produce a linear 4 to 20 mA / (0)2 to 10 V signal, proportional to the gas concentration.

Semiconductor gas sensors produce a non-linear (exponential) signal due to their measuring function.

The Single Point Gas Controller REF is prepared for both types of gas transmitters. The classification of signals is defined in this menu.

The integrated sensor, however, emits an already linearised signal. Therefore choose "linear" for MP01.

Symbol	Description	Setting Status	Function
MP 01	Measuring Point		Selection of MP No.
Linear	MP Signal	Linear	Linear = Transmitter with linear output signal Non linear = Transmitter with non-linear output signal

3.6.5 Threshold / Hysteresis

For each measuring point four alarm thresholds are available for free definition. If the gas concentration is higher than the adjusted alarm threshold, the associated alarm is set. If the gas concentration falls below the alarm threshold inclusive hysteresis the alarm is again reset.

Unused alarm thresholds have to be defined at measuring range end point, in order to avoid false alarms.

At O₂ measurement an alarm is released by a decreasing measuring signal!

Symbol	Description	Default Status		Function
MP 01	Measuring Point			Selection MP No.
300 ppm	Thresholds	300 500 500 2000 50	Threshold 1 Threshold 2 Threshold 3 Threshold 4 Hysteresis	Gas concentration > Threshold 1 = Alarm 1 Gas concentration > Threshold 2 = Alarm 2 Gas concentration > Threshold 3 = Alarm 3 Gas concentration > Threshold 4 = Alarm 4 Gas concentration < (Threshold X –Hysteresis) = Alarm X OFF

3.6.6 Delay of Alarm ON or OFF

Definition of alarm ON and/or alarm OFF delay. The function applies to all alarms of an MP.

Symbol	Description	Default Status	Function
MP 01	Measuring Point		Selection of MP No.
0 s	Delay Time ON	0	Gas concentration > Threshold: Alarm is only activated at the end of the fixed time (sec.). 0 sec. = No Delay
0 s	Delay Time OFF	0	Gas concentration < Threshold: Alarm is only deactivated at the end of the fixed time (sec.). 0 sec. = No Delay

3.6.7 Control Mode

Definition of the alarm evaluation by means of current (CV) or average value (AV).

Symbol	Description	Default Status t	Function
MP 01	Measuring Point		Selection of MP No.
CV	Evaluation		CV = Control by the current gas value AV = Control by the average gas value

Current- average value function see: 3.7.4

3.6.8 MP Fault Assigned to Alarm

Definition, which alarms are activated in case of a fault at the measuring point.

Symbol	Description	Default Status	Function
MP 01	Measuring Point		Selection of MP No.
Alarm - 1 2 3 4 Fault - 0 0 0 0	Failure MP	0000	0 = Alarm not ON at MP failure 1 = Alarm ON at MP failure

3.6.9 Alarm Assigned to Alarm Relay

Each of the 4 alarms can be assigned to any alarm relay.

Unused alarms are not assigned to any alarm relay.

Symbol	Description	Default Status	Function
MP 01	Measuring Point		Selection of MP No.
1	A1 A2 A3 A4	01 02 03 04	01 = Alarm 1 activates alarm relay R 01 02 = Alarm 2 activates alarm relay R 02 03 = Alarm 3 activates alarm relay R 03 00 = Alarm 4 doesn't activate any alarm relay

3.6.10 MP Signal Assigned to Analog Output

The measuring point signal can be assigned to the analog output.

At this the signal defined in the control mode (current or average value) is transmitted. Analog output see also: 3.7.7

Symbol	Description	Default Status	Function
MP 01	Measuring Point		Selection of MP No.
0	А	0	0 = MP Signal not assigned to analog output 1 = MP Signal assigned to analog output 1

3.7 Menu System Parameters

Displays and changes the system parameters of the Gas Controller module.

3.7.1 Service Mode

When the service mode is active (ON) the alarms are not transmitted to the alarm relays (in case of calibration or service work).

The service mode is reset automatically after 60 minutes or manually in the menu "Service Mode".

Symbol	Description	Default Status	Function
Off	Service Mode	Off	Off = Alarms activate the associated alarm relays On = Alarms are not transmitted to the alarm relays

3.7.2 Software Version

Symbol	Description	Default Status	Function
GC03- XX	Software Version		XX = Software Version

3.7.3 Maintenance Concept

Integrated in the REF system there is a control of the maintenance intervals required by law or by the customer. At commissioning or after maintenance the date for the next maintenance is entered.

When reaching this date the failure signal is activated the following morning at 9 o'clock, and the phone no. of the service technician occurs in the display.

The fault signal (maintenance) can be acknowledged by the operator.

The maintenance message (service phone no.) is reset by entering the next maintenance date after having accomplished the maintenance. See also 3.7.5

The service phone no. can be entered individually in the next menu.

Symbol	Description	Default Status	Function
TT.MM.JJ	Maintenance Date		TT.MM.JJ = Input of the date for the next maintenance
0853	Phone No.		Input of the individual service phone no.

3.7.4 Average Function

For each active measuring point the Single Point Gas Controller calculates the arithmetic average value out of 10 measurements got within the time unit defined in the menu "AV Time".

This average value is indicated in the menu "Measuring Values" next to the current value.

At each measuring point the control mode (current or average value) is defined for the alarm evaluation.

The alarm evaluation of the control mode average value is overlaid by the current value, when the current value exceeds the alarm threshold defined in the menu "AV Overlay".

The overlay is delayed by the time factor defined in this menu.

Whit time factor 0 sec. the overlay is not active.

Symbol	Description	Default Status	Function
120 s 120 ppm	120 s 120 ppm AV Overlay 120 s 120 ppm		sec. = Delay time of average value overlay. ppm = Alarm threshold of average overlay
1800 s AV Time 1800 s		1800 s	sec. = Time for the calculation of the average value

3.7.5 System Time, System Date

Time and date have no memory back up; therefore after each power supply OFF-ON time and date restart. Input and correction of time and date. Selection of the time and date format.

Symbol	Symbol Description Default Status		Function	
EU	Time format	EU	EU = Display of time and date in EU format US = Display of time and date in US format	
hh.mm.ss	h.mm.ss Time		hh.mm.ss = Input of the correct time (EU format) hh.mm.ss am = Input of the correct time (US format)	
TT.MM.JJ	Date		TT.MM.JJ = Input of the correct date (EU format) MM.TT.JJ = Input of the correct date (US format)	

3.7.6 Customer Password (Code 1)

Change the system password for level 1

Symbol	Description	Default Status	Function
1234	Customer Password	1234	1234 = Define the customer's password with 4 characters

3.7.7 Analog Output

The Single Point Gas Controller has one analog output (AO01) with (0)4 to 20 mA / (0)2 to 10 V signal.

The signal of MP01 or/and MP02 can be assigned to the analog output.

The assignment is effected in the menu "MP Parameters" for each MP.

The measuring point sends the signal, which is defined in the menu "C/A Mode".

The output signal (mA / V) and starting point (0 / 20%) is selected at the I/O Board by means of jumper. See fig. 4.

Out of the signals of all assigned measuring points the Single Point Gas Controller determines the minimum, the maximum or the average value and transmits it to the analog output.

The definition, which value is transmitted, is effected in the menu "Analog Output 1".

The analog output can be calibrated at 4 and at 20 mA, only in mA mode.

Therefore an ampere meter (measuring range 25 mA) can be attached to the AO and the respective factor has to be changed until the analog output corresponds to 4 and/or 20 mA.

During calibration evaluation of the measuring point signals is not possible.

This calibration is effected by the factory. The factors shall not be changed.

Symbol	Description	Default Status	Function
Max.	Select Output Mode	Max.	Min. = Displays the minimum value of all assigned MP Max. = Displays the maximum value of all assigned MP Average = Displays the average value of all assigned MP
4.0 20.0	Calibration	4.0 20.0	4.= Calibration factor at 4 mA20.0= Calibration factor at 20 mA

3.7.8 Define the Failure Relay

Definition of the failure relay. See also fault management (3.1)

Symbol	Description	Default Status	Function
0X	Fault Relay	R0X	R0X = Define the fault relay

3.7.9 Power On Time

Gas sensors need a running-in period, until the chemical process of the sensor reaches stable conditions.

During this running-in period the current signal can lead to an unwanted releasing of a pseudo alarm.

Therefore the power on time is started at the REF after having switched on the power supply.

While this time is running out, the Gas Controller does not activate any alarms.

The power on status occurs in the starting menu.

Symbol	Description	Default Status	Function
30 s	Power On Time	30 s	XX = Define the power on time (sec.)

4 Mounting / Electrical Connection

The Gas Controller is fixed to the wall through the 4 marked mounting holes at the back side of the housing.

These mounting holes are accessible after opening the housing.

For mounting you additionally have to plug off the PCB. See fig. 01.

The mounting holes are covered with the enclosed caps after the end of the installation.

We recommend considering the following when choosing the mounting position:

- The installation height depends on the gas type to be detected. For gases whose specific weight is higher than that of air the installation is near the ground. For gases with a specific weight lower than that of air installation has to be at the highest point possible.
- Cables are inserted from below.
- Keep a minimum distance of 150 mm on the right side in order to open the stainless steel housing.
- Customer's instructions.

4.1 Electrical Connection

The technical requirements and regulations for wiring, electrical security, as well as project specific and environmental conditions etc. must be observed when mounting.

The electrical installation may only be completed by a qualified electrician in full compliance with pertinent regulations.

We recommend the following cable types¹

- Power supply J-Y(St)Y 2x2 x 0,8
- Alarm relay J-Y(St)Y 2x2 x 0,8
- Gas transmitter J-Y(St)Y 2x2 x 0,8

¹ The recommendation does not consider local conditions such as fire protection etc.

For the exact position of the terminals see the following connection diagram.

4.2 Connection Diagram

Connection diagram with an optional 4 to 20 mA transmitter*

Connection diagram with an optional (0) 2 to 10 V transmitter*

* The analog input function is determined by the hardware. Each PCB has got a label with the specific type. See fig. 4.

4.3 Overview REF Module / Connector Block

Fig. 5

Selection of the analog output signal

Jumper 0- 20 %	Jumper V-A	Output signal
Not set	Not set	0 – 20 mA
Set	Not set	4 – 20 mA
Not set	Set	0 – 10 V
Set	Set	2 – 10 V

5. Commissioning

2.1 Commissioning

Fig. 4

Prior to commissioning, the wiring of the REF including all field devices must be completely terminated!

Check the optional external transmitter input signal, it has to be the same as indicated on the label of the PCB. See fig. 4

Select the contact for relay No. 2 with jumper NC/NO. See fig. 2/3 and 4.

Select the analog output signal with jumper V-A and 0-20%. See fig. 4.

After switching the power supply "ON" and at the end of the Power ON Time, the REF is ready for use.

The REF is delivered with standard parameters and set points.

The registration of the optional external gas transmitter and the assignment of the alarm relays to the individual alarms must always be performed during commissioning.

Additionally all other parameters have to be checked and adapted to the local conditions.

The standard parameters can be taken from the following configuration and parameter card.

We recommend registering the individual parameters and set points into the list.

We recommend checking the parameters and set points according to the following check list.

5 Gas Sensor

5.1 Description

A semi-conductor sensor is integrated in the REF.

The ambient air being monitored diffuses through a metal grid into the sensor.

The gas oxidises at the heated detector element (metallic oxide) and changes the conductivity in dependence of the gas concentration.

This non-linear alteration of the conductivity is evaluated by the internal sensor electronics and linearised by the micro-processor.

The temperature compensation is also integrated in the transmitter.

Oxidation processes lead by-and-by to an unwanted influence on the alteration of the conductivity.

Therefore regular calibrations of zero-point (Zero) and gain are necessary.

Caution:

Certain substances and gases in the atmosphere being monitored can affect the sensitivity of the refrigerant gas sensor element and/or poison the sensor completely. The following are currently known:

- Silicones.
- Corrosive substances, like H₂S, SO_x, Cl₂, HCl, etc. can lead to corrosion and damage of the sensor.
- Alkaline metals cause a considerable drift of the sensor.

5.2 Calibration

Required instruments to calibrate the transmitter:

- Test gas bottle with refrigerant test gas* in the range of 1000 ppm for measuring range of 2000 ppm or 100 ppm for measuring range 300 ppm.
- Gas pressure regulator with flow meter to control the gas flow to 300 ml/min.
- Calibration adapter with tube, (silicon-free, e.g. Viton). Calibration set AT 1110S02. See fig. 06.
- Digital voltmeter with range 0 10 VDC, accuracy 1%
- A small screwdriver.

*Test gas R 22 or R134a, depending on the used sensor, see table Overview Gases/ Data.

5.2.1 Zero-Point Calibration

The zero-point calibration of the sensor is not necessary, because the zero-point of the output signal has already been factory-calibrated.

5.2.2 Gain Calibration

Attention: Refrigerant calibration gas is toxic, never inhale the gas! Symptoms: Dizziness, headache and nausea. Procedure if exposed: Take the victim into fresh air at once, call a doctor.

Prior to calibration the sensor element must be fully stabilized by applying power voltage for at least 8 days without interruption.

Please observe proper handling procedures for test gas bottles (regulations TRGS 220)!

- Open window MP 01 in the menu "Measuring Value".
- Connect digital voltmeter to pin "Bridge" (-) and ground (X4 pin 2). See fig. 4.
- Connect calibration adapter carefully to the sensor element.
- Apply calibration test gas 100 ppm or 1000 ppm (300 ml/min; 1 Bar (14.5 psi) ± 10%).
- Wait three minutes until the value is stable; adjust calibration voltage with potentiometer "Zero" to the value according to the table Overview Gases/ Data.
- Then adjust the display value to the calibration gas value with the potentiometer "Gain".
- Remove calibration adapter with a careful light turn. Check the sensor for correct mounting!
- By limiting the gain factor, calibration will not be possible any more when the sensitivity of the sensor reaches a residual sensitivity of 30%. Then the sensor has to be replaces.

5.3 Table Overview Gases/ Data

5.4 Exchange of Sensor Element

Sensor has to be replaced completely including the electronics.

The replacement electronics with the new sensor is already factory-calibrated.

After exchange of the electronics the REF parameters have to be checked and adjusted if necessary.

5.5 Cross-sensitivity Data

Sensor	Gas	Formula	Reaction
TGS 830	Ethanol	C ₂ H ₈ O	< 1
TGS 832	Ethanol	C ₂ H ₈ O	< 1
	Ethanol	C ₂ H ₈ O	< 1
SP42A	Iso-butane	C_4H_{10}	< 1
	Methane	CH ₄	<<1

6 Specification Gas Sensor

Sensor performances	
Gas type	Refrigerant gases, see table Gases/ Data
Sensor element	Semi-conductor sensor
Measuring range	20 – 300 / 20 - 2000 ppm
Response time	t ₉₀ < 40 sec.
Repeatability	± 20 %
Oxygen concentration	21 % (standard) 18 % minimum level
Life expectancy	> 5 years/normal operating environment
Temperature range	- 10 °C to + 50 °C (14°F to 122 °F)
Humidity	5 – 95 % RH non condensing
Pressure range	Atmosphere ± 10 %
Storage temperature range	0 °C to 50 °C (32 °F to 122 °F)
Storage time	Max. 12 months
Mounting height	Depending on gas type

Calibration adapter Fig. 6 Type: Calibr-set-

7 Notes and General Information

It is important to read this user manual carefully in order to understand the information and instructions.

The REF gas monitoring, control and alarm system may only be used for applications in accordance to the intended use.

The appropriate operating and maintenance instructions and recommendations must be followed.

Due to permanent product developments, AP reserves the right to change specifications without notice.

The information contained herein is based on data considered to be accurate.

However, no guarantee or warranty is expressed or implied concerning the accuracy of these data.

7.1 Intended Product Application

The REF is designed and manufactured for controlling, for saving energy and keeping OSHA air quality in commercial buildings and manufacturing plants (i.e. detection and automatic exhaust fan control for automotive maintenance facilities, enclosed parking garages, engine repair shops, warehouses with forklifts, fire stations, tunnels, etc.).

7.2 Installers` Responsibilities

It is the installer's responsibility to ensure that all REF are installed in compliance with all national and local regulations and OSHA requirements.

All installations shall be executed only by technicians familiar with proper installation techniques and with codes, standards and proper safety procedures for control installations and the latest edition of the National Electrical Code (ANSI/NFPA70).

It is also essential to follow strictly all instructions as provided in the user manual.

7.3 Maintenance

We recommended checking the REF system regularly.

Due to regular maintenance differences in efficiency can easily be corrected.

Limited Warranty Re-calibration and part replacement may be implemented in the field by a qualified technician and with the appropriate tools.

Alternatively, the easily removable plug-in transmitter card with the sensor may be returned for service to Automatikprodukter.

7.4 Limited Warranty

AP warrants the REF against defects in material or workmanship for a period of one (1) year beginning from the date of shipment.

Should any evidence of defects in material or workmanship occur during the warranty period, AP will repair or replace the product at their own discretion, without charge.

This warranty does not apply to units that have been altered, had attempted repair, or been subjected to abuse, accidental or otherwise.

The above warranty is in lieu of all other express warranties, obligations or liabilities.

This warranty applies only to the REF.

AP shall not be liable for any incidental or consequential damages arising out of or related to the use of the REF.
