### Application

For detection leakages in refrigeration plants with ammonia as refrigerant and also within a wide range of commercial and industrial applications.

Due to the analogue signal 4-20mA and 2-10Vdc the NH3 transmitter is compatible to any electronic analogue control, DDC/PLC control or automation system.

#### Connecting Diagram

Terminal 2 is only for 2-10Vdc signal = 3-wire  
4-20mA two-wire loop powered

#### Maintenance

At commissioning and at periodic intervals determined by the person responsible for the gas detection system (**recommendation every year**).

#### After exchange of the sensor

If in case of operational or climatic influences the sensitivity of the sensor **falls below 30 %** in operation, calibration will not be possible any more.

Then the sensor has to be changed.

#### Exchange of sensor element

Sensor should always be installed without power applied:

- Unplug basic PCB EC-S carefully from the terminal blocks on the base.
- Unplug old sensor element from the PCB EC-S.
- Plug in sensor element into the PCB EC-S.
- Plug in the PCB EC-S into terminal block carefully.
- Calibrate
